

Stakeholder's KT Needs & Capacities

You *need* research that is relevant to your context.

You *need* research that looks at options you have control over.

You *need* research that gets to the point fast.

You *need* research that asks questions from your point of view and uses your language.

You *need* research that describes how and under what conditions an intervention worked – not just if it worked.

You *need* to find research easily and at low cost.

You *need* research grant \$ if you're a project partner.

You *need* to understand research that's meant to improve your work.

You *can* educate researchers about your context.

You *can* collaborate in defining important research topics/questions.

You *can* provide constructive feedback when research reports are insufficiently detailed. Ask for more.

You *can* help researchers “translate” findings into key messages for your sector.

You *can* introduce researchers to relevant decision-makers/opinion leaders in your sector.

You *can* be a “content expert” - not a “junior researcher”.
